

# EvidenceWorks® BWV

Secure, integrated management of Body Worn Video

**EvidenceWorks® BWV is a module of the EvidenceWorks® Digital Evidence Management platform that brings a new, secure and integrated approach to the management of Body Worn Video to Police Forces as part of a holistic approach to the management of all digital media and evidence.**

EvidenceWorks® BWV employs the same networked repository infrastructure integrated with camera docking and download capability to provide a seamless process for officers to transfer all videos captured during a shift into the system, analyse them, add metadata and securely store them with policies defined according to guidelines on retention, review and disposal.

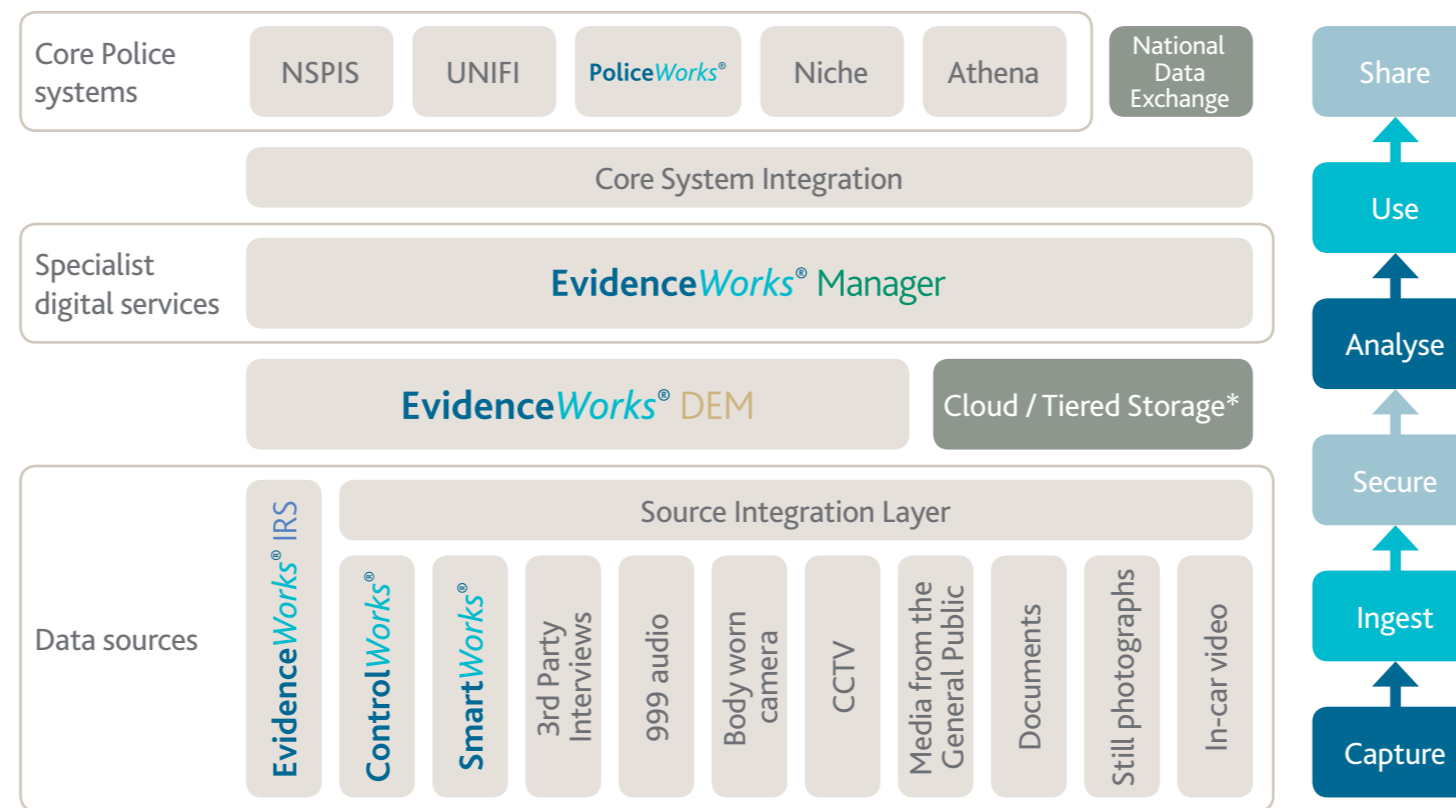

Once ingested into the repository all the files are available through the EvidenceWorks® Manager application across the network to allow for further review, cropping and integration with case files and record management systems – with all access, viewings and actions taken audited to ensure evidential integrity. If integrated with other data sources such as CCTV, Digital Interviews or CSI images all the BWV footage can be viewed alongside these items to provide a complete view of all evidence as part of ongoing investigations.

Whilst EvidenceWorks® BWV is camera agnostic and will work with a range of BWV cameras vendors to provide an integrated solution, EvidenceWorks has recently been developed with our partner Edesix, to provide a fully integrated, scalable solution available from Lots 3 and 4 of the National Body Worn Video Framework.

## Solution highlights

- Ingest, catalogue, search/retrieve, clip/edit, share
- Metadata from native devices or added by users
- Improved data quality
- Reduced data entry
- Original media retained and copies/edits audited
- Central core database that can integrate with force tiered storage solutions
- Maintains Evidential Integrity through audit and access controls
- MoPI compliant with full review, retain and delete management of data
- Provides user access to stored data for search and retrieval with each item allocated a workflow for review by a user
- Specialist Audio and Video services for review and edit and 'case file building' and workflow
- Modular licencing for data sources
- System Management, profiles and configuration

\* Force or EvidenceWorks® supplied

## Integrate with other digital sources

Organisations, especially in the Criminal Justice sector, are facing the challenge of ingesting, securing and managing huge volumes of digital information from a vast array of sources. As a module of the wider EvidenceWorks® solution output from EvidenceWorks® BWV can be integrated with other digital data sources, either from EvidenceWorks® or third parties, as part of a secure, integrated digital repository subject to the same, proven security and access controls, PACE compliant and able to be integrated with Records Management Systems and other external case management solutions.

## Savings and benefits

The benefits of deploying BWV cameras have been evaluated across the sector through a range of trials and pilot deployments leading to the continued investment in force-wide roll out programmes.

However, deploying EvidenceWorks® BWV can deliver further savings and benefits beyond those generated solely by providing cameras to officers.

- Standardisation, with opportunities for economies of scale
- An integrated IT solution to store evidential digital media in one place and act as a future common point of integration for other agencies (e.g. CPS) and for sharing evidence between forces both regionally and nationally
- Allows an evolutionary approach that aligns with and supports a digital migration strategy
- A solution that is agnostic to camera vendor. This allows potential re-use of existing BWV assets and provides flexibility of choice
- A single point of service contact to manage potentially multiple camera vendors and the end-end solution
- Scalable enterprise level support
- Continuous innovation via our rich and wide product suite
- Active product user group
- Standardisation of operating model for BWV across force/region providing opportunities for operational efficiencies
- The critical mass of a major industry supplier, 'a safe pair of hands', reduces the risk of partnering with smaller independent hardware centric BWV vendors
